CURRICULUM VITAE

STEPHANIE S. HONG, M.S.,S.B, F.A.M.I.A.
Director, Tranlational Informatics Applications,
Biomedical Informatics and Data Science Section,
Division of General Internal Medicine, Department of Medicine
Johns Hopkins University School of Medicine

Date March 17, 2025

Contact Information

Business Address: Johns Hopkins University School Medicine,
General Internal Medicne, Department of Medicine
Biomedical Informatics and Data Science Section
2024 E Monument St, Suite1-200
Baltimore, MD 21205

Email: shong59@jh.edu
Foreign Languages: Korean (fluent)
ORCID Number: https://orcid.org/0000-0002-0795-1293

Education

1988	B.S. Electrical Engineering, Massachusetts Institute of Technology
2025	M.S. Applied Health Science Informatics (online) , Johns Hopkins University School of Medicine, (expected in March)

Employment History

1987 - 1989	Software Engineer, Wang Laboratories, Inc., Lowell, MA
1989 - 1990	Software Engineer, Clinical Information Advantages, Inc., Waltham, MA
1990 - 1992	Senior Consultant/Business Analyst, Logica Data Architects, Inc., Waltham, MA
1992 - 1994	Senior Software Engineer, Sigma Imaging Systems, New York, NY
1994 - 2004	Senior Software Engineer, Oracle/ Hyperion Solutions, Stamford, CT
2004 - 2006	Technical Lead/Senior Software Engineer, Cognos/Applix, Inc. Waltham, MA
2014 - 2017	Application Developer/ Healthcare Systems Data Analyst, Vanderbilt Institute for Clinical and Translational Research, Vanderbilt University Medical Center, Nashville, TN
2019 - 2020	Bioinformatics Volunteer, University of Maryland School of Medicine, Baltimore, MD
2020 – 2022	Clinical Data Analyst, Biomedical Informatics and Data Science Section, Division of General Internal Medicine, Department of Medicine, Johns Hopkins University School of Medicine, Baltimore, MD
2022 - 2023	Software Engineer, Biomedical Informatics and Data Science Section, Division of General Internal Medicine, Department of Medicine, Johns Hopkins University School of Medicine, Baltimore, MD
2023 - present	Sr. Software Engineer / Director, Translational Informatics Applications, Biomedical Informatics and Data Science Section, Division of General Internal Medicine,

Department of Medicine, Johns Hopkins University School of Medicine, Baltimore, MD

Professional Society Membership

2020 - present Member, American Medical Informatics Association

Honors and Awards

2022 Fellow, American Medical Informatics Association
2023 Grand Prize Winner, Federation of American Societies for Experimental Biology DataWorks Competition
2023 Best Contribution Award for Observation Data Standards and Management category, Observational Health Data Sciences and Informatics (OHDSI) Global Symposium 2023

Administrative Service

National/International Data Service for COVID research Data Repository

2020 - present

- Member, The National COVID Cohort Collaborative (N3C) Data Enclave.
  It is a platform that provides researchers access to COVID-related patient EHR data in OMOP CDM format. It is the largest centralized repository of COVID-related Patient EHR data in U.S, for COVID-19 surveillance. The N3C is the largest collections of secure and deidentified clinical data in OMOP to date. It includes 36+ billion rows of data from 23+ million Patients >9+ million COVID patients EHR data ingested from 86+ DTAs around United States. As the lead programmer for the Data Ingestion and Harmonization workstream, designed the data pipeline and wrote the terminology transformation code to ingest 86+ site's EHR data from their native formats, – PCORnet, ACT, OMOP, TriNetX, PEDsNet CDM datasets – and harmonizes the data into a common data model (CDM) based on the Observational Medical Outcomes Partnership (OMOP) 5.3.1 version. For this effort, I was elected Fellow of the American Medical Informatics Association in 2022. The same data pipeline generation code is currently being used to rollout N3C Clinical Pilot program to extended the research capabilities for other clinical research initiative, e.g. Cancer, COPD, Alzheimer and Renal cohort. Contributed to the research guide to N3C online book chapters and podium presentation at AMIA Informatics Summit and OHDSI Global Symposium.

- CRISP
  Designed and implemented data pipeline to ingest CRISP dataset, state designated Health Information Exchange of Maryland, into OMOP CDM instance for COVID research. It is implemented in Microsoft Azure Databricks environment. Deployed the dataset to support multiple IRB approved public research projects.

- AI-READI

Led data standardization and harmonization to map AI-READI data elements and harmonize survey data, enabling sharing that meet the FAIR (Findable, Accessible, Interoperable, Reusable) Principles. We minted new custom concept ids to generated AI-READI vocabularies to overcome challenges of mapping non-standard datasets. Applied approaches in standardizing and harmonizing newly collected survey instrument data for meaningful use and how we integrated survey data into the AI-READI datsets. The Artificial Intelligence Ready and Equitable Atlas for Diabetes Insights (AI-READi) project is one of the four Data Generation Projects funded by Bridge2AI, an NIH Common Fund Program aimed at setting the stage for widespread adoption of AI in health research. multiple data element mapping and ETL implementation projects with collaborative teams in multiple geographic locations, provided technical training to rotating students as well as provided technical guidance to contractors, co-team members and junior members of the technical team.

- CLAD project
  Iron-CLAD: Securely Advancing **All of Us** Participant Characterization with Proven Platforms and Collaborations (All of Us Center for Linkage and Acquisition of Data (CLAD)). Stephanie played a pivotal role in leading a team that implemented a data ingestion and harmonization pipeline to translate FHIR data sources into an OMOP CDM instance. Additionally, she contributed significantly by supporting the team and translating CCDA document and claims data into the OMOP CDM format.

2022 - present	Member, Bridge2AI Standards Core Team
2023 - present	Member, BioData Catalyst (BDC) Data Standards Core team. Both team aims to develop best practices for data collection, deposition, quality assurance, query, dissemination, and integration across Data Generation Projects and BDC projects.
2023 - present	Member, Observational Health Data Sciences and Informatics (OHDSI) Common Data Model (CDM) Working Group
2023 - present	Member, Observational Health Data Sciences and Informatics (OHDSI) Data Quality Working Group
2023 - present	Member, Observational Health Data Sciences and Informatics (OHDSI) Vocabulary Working Group
2023 - present	Member, Observational Health Data Sciences and Informatics (OHDSI) Eye Care and Vision Imaging Working Group
2023 - present	Member, Observational Health Data Sciences and Informatics (OHDSI) Databricks Implementation Working Group
2023 - present	Member, Observational Health Data Sciences and Informatics (OHDSI) Open Source Technical Advisory Board,

Teaching Service
Provided guidance to Biomedical Informatics and Data Science Program (BIDS) graduate students who rotated in Dr. Chute's lab:
Anas Belouali, Emir Syailendra, Shijia Zhang, and Haeun Lee.

Graduate Education
Johns Hopkins University School of Medicine, Teaching Biomedical Informatics and Data Science Program Teaching Assistant. MB.250.778, Fast Healthcare Interoperability Resources (FHIR) is transforming healthcare with an open-web services' standards approach to clinical integration. This course is a hands-on experience working on integrating digital health and clinical systems interoperability.

- 2024 spring term - Teaching Assistant, Implementing Fast Healthcare Interoperability Resources, ME.250.778.0000.SP24
- 2025 spring term - Teaching Assistant Implementing Fast Healthcare Interoperability Resources, ME.250.778.0000.SP25

Grant Support

Active Grants

10/1/ 2023 – 10/1/2027 (Key Contributor) PI Melissa Haendel, PhD
The CLAD project
Aims to enhance the All of Us Research Program by linking new data types (e.g., healthcare claims, mortality data, and environmental data) to participant records, supporting precision medicine research.
NIH, Grant Number: OT2OD036113

4/1/2022 – 3/31/2027 (Key Contributor) Multi-PI: Drs. Aaron Lee and Cecelia Lee
AI-READi Project
Researching ethical data integration and harmonization for Type 2 Diabetes (T2DM) insights. The AI-READI project aims to create a flagship, multimodal dataset focused on type 2 diabetes mellitus (T2DM) that is ethically sourced, diverse, and optimized for AI and machine learning (AI/ML)

analysis. The goal is to enable future discoveries, particularly regarding salutogenic pathways (processes leading to health recovery) in T2DM, and to address health disparities in understudied populations.
NIH Common Fund, Bridge2AI Program
Grant Number: 1OT2OD032644

7/1/2023 – 6/30/2027 (Key Contributor) Multi-PI Grant with Dr. Christopher Chute and Melissa A. Haendel
N3C Project
The N3C Data Ingestion and Harmonization Pipeline Development is a critical component of the National COVID Cohort Collaborative (N3C), a large-scale initiative led by the National Center for Advancing Translational Sciences (NCATS) at the NIH
Maintaining and enhancing pipelines for harmonizing multiple CDM models into OMOP for COVID-19 research.
This grant is funded by the NIH's National Center for Advancing Translational Sciences (NCATS) under the Clinical and Translational Science Awards (CTSA) Program.
NIH/NCATS Grant Number: U24TR002306

8/1/2022 -8/1/2025 (Key Contributor) , RTI International as primary awardee, sub-awardee with Dr. Christopher Chute,
BioData Catalyst(BDC) Data Management Core (DMC) Project
BDC Data Management Core (DMC), our work supports the platform's mission to manage and enhance access to large-scale heart, lung, blood, and sleep (HLBS) datasets
BDC framework is tied to the broader BDC Consortium efforts, specifically the NHLBI BioData Catalyst Data Management Core (DMC) providing expertise in biomedical informatics and data standardization to this project, supporting the DMC's goals of improving data accessibility and interoperability for HLBS research.
NIH Grant# HL167310

Participating in the following list of active grants

- National Covid Cohort Collaborative expires in September 2024 – Extension in review
- Post-acute sequelae SARS-CoV-2 infection (PASC) will end in 2024 with extension into 2025
- National Clinical Cohort Collaborative (Pilot program for Renal, COPD, and Alzheimer ended and transferred to Cancer Enclave)
- BRIDGE2AI- AI-READi (https://bridge2ai.org/standards-core/, expires in 4yrs)
- NHLBI BioData Catalyst, Data Management Core (expires in 3 year)
- All of US, Center of Linkage and Acquisition of Data (CLAD) (expires in 5 years)

Completed Grants

- National Covid Cohort Collaborative expires in September 2024 with no cost extension into 2025

Work-in-Progress, first author papers:

- CMS paper - Augmenting the National COVID Cohort Collaborative (N3C) Dataset with Centers for Medicare and Medicaid Services (CMS) Data, Secure and De-identified Clinical Dataset - https://www.ohdsi.org/wp-content/uploads/2023/10/4-HongBriefreport2.pdf
- Pipeline paper - National COVID Cohort Collaborative (N3C) & FastHealthcare Interoperability Resources (FHIR®) pipeline implementation to OMOP CDM - https://github.com/National-Clinical-Cohort-Collaborative/Data-Ingestion-and-Harmonization
- Strength and weaknesses of in silo replication of epidemiological studies: Benzodiazepines treatment and patient outcome: Survival Analysis of Benzodiazepines in Patients with a History of Cancer.
- Streamlining Research Data Standardization: AI-READI Survey Instrument Data Elements and MoCA Measurement Data Elements are curated and mapped utilizing a Standardized Value Set Mapping Table for transformation into the OMOP Common Data Model, https://www.ohdsi.org/wp-content/uploads/2024/10/12-hong-stephanie_briefReport_StreamliningResearchDataStandardization_2024symposiumFinal-Stephanie-S-Hong.pdf

Major Invited Poster Presentation/Panel

National

1. Augmenting the National COVID Cohort Collaborative (N3C) Dataset with Medicare and Medicaid (CMS) Data, Secure and De-identified Clinical Dataset, N3C DIH workstream presentation, Stephanie Hong November 14, 2023, N3C Workstream presentation
2. Bridge to AI Leadership Meeting, Science Talk Presentation, AI-READI Salutogenesis (AI-READI DGP)- Science Talk Section
   The Artificial Intelligence Ready and Equitable Atlas for Diabetes Insights (AI-READI) project is part of the NIH Bridge2AI Common Fund Program, aimed at establishing a robust foundation for the integration of artificial intelligence (AI) in health,research. Data collection utilized 47 custom-designed and well validated survey instruments to capture a broad spectrum of information. Data was then transformed into the Observational Medical Outcomes Partnership (OMOP) Common Data Model (CDM), ensuring uniformity in format and harmonized to OMOP standard concept**.**
   https://docs.google.com/presentation/d/1oRcIhiRf66O53kr1fN2mc3kZts9ugPoZ/edit#slide=id.p17
3. Panel discussion titled "Challenges and Opportunities in Building a Data Sharing Ecosystem for Health Research & Surveillance," presented at the Potomac Officers Club's 2023 Healthcare Summit, Falls Church, Virginia, The panel was moderated by John Beresny, Director of the Health Solutions Division at Noblis, and included other esteemed panelists such as Dr. Christopher Chute, Bloomberg Distinguished Professor of Health Informatics at Johns Hopkins University and Medicine, and Dr. Kimberly Marschhauser, Associate Director at the Patient-Centered Outcomes Research Institute (PCORI). Panel discussed the complexities and prospects associated with establishing a comprehensive data-sharing ecosystem to enhance health research and surveillance efforts. https://potomacofficersclub.com/events/poc-2023-healthcare-summit/

OHDSI Global Symposium:

1. Augmenting the National COVID Cohort Collaborative (N3C) Dataset with Medicare and Medicaid (CMS) Data, Secure and Deidentified Clinical Dataset, Stephanie Hong, et. al, N3c Consortium, https://www.ohdsi.org/2023showcase-4/
2. Streamlining Research Data Standardization: AI-READI Survey Instrument Data Elements and MoCA Measurement Data Elements are curated and mapped utilizing a Standardized Value Set Mapping Table for transformation into the OMOP Common Data Model, Stephanie S. Hong, et al, AI-READI consortium, https://www.ohdsi.org/2024showcase-12/
